

Note of release:

This plan is just a recommendation and must only be used after release by the planner / architect commissioned by the building owner or approved by the direction of works by authorized the building owner!

Deutsche Steinzeug GmbH expressly excludes liability for all kinds of damages which may result from the plan!

Without corresponding release the documents are used on the own responsibility and at the sole risk of the executive of construction works.

This plan has been examined, found correct and released for execution:

Place, date Stamp and signature

**33,33 m x 25 m
POLO - POOL**

--- stical movement joints / joints in the structure
--- additional movement joints in the ceramic covering

Movement joints are to be positioned according to stical requirements and local conditions or in accordance with the instructions of the architect or responsible resident engineer. All movement joints, additional expansion joints in the covering etc., which are shown in drawings from the service for architects, shall be regarded as recommendations only.

Our suggested methods of sealing are given for guidance only.
Binding instructions must be given by the architect or supervisor of construction.

We recommend to use epoxy resin for filling the joints in the whole pool head area, including channel. In case of chemical stresses caused by acid-, sea or thermal water, the entire pool should be jointed with epoxy resin. It is absolutely necessary to follow the processing instructions given by the manufacturer / supplier.

The currently valid FNA rules as well as the regulations of the country in question have to be observed.

Number and position of channel outlets are to be fixed by the expert planner.
Our instructions concerning the cleaning of ceramic coverings have strictly to be observed.

Building Project: 33,33 m x 25 m Polo - Pool
