

IN CONFORMITY WITH DIN 19 643-1,  
TREATMENT OF SWIMMING AND BATHING POOL WATER:  
- OVERFLOW CHANNEL AT ALL SIDES OF THE POOL  
- MAXIMAL LEVEL DIFFERENCE ± 2 mm

ACCORDING TO - GUV-R 108 AND DIN EN 15288-1 - :  
IN CASE OF ELEVATED WATER LEVEL THE POOL EDGE AND OVERFLOW EDGE  
MUST BE CLEARLY VISIBLE!

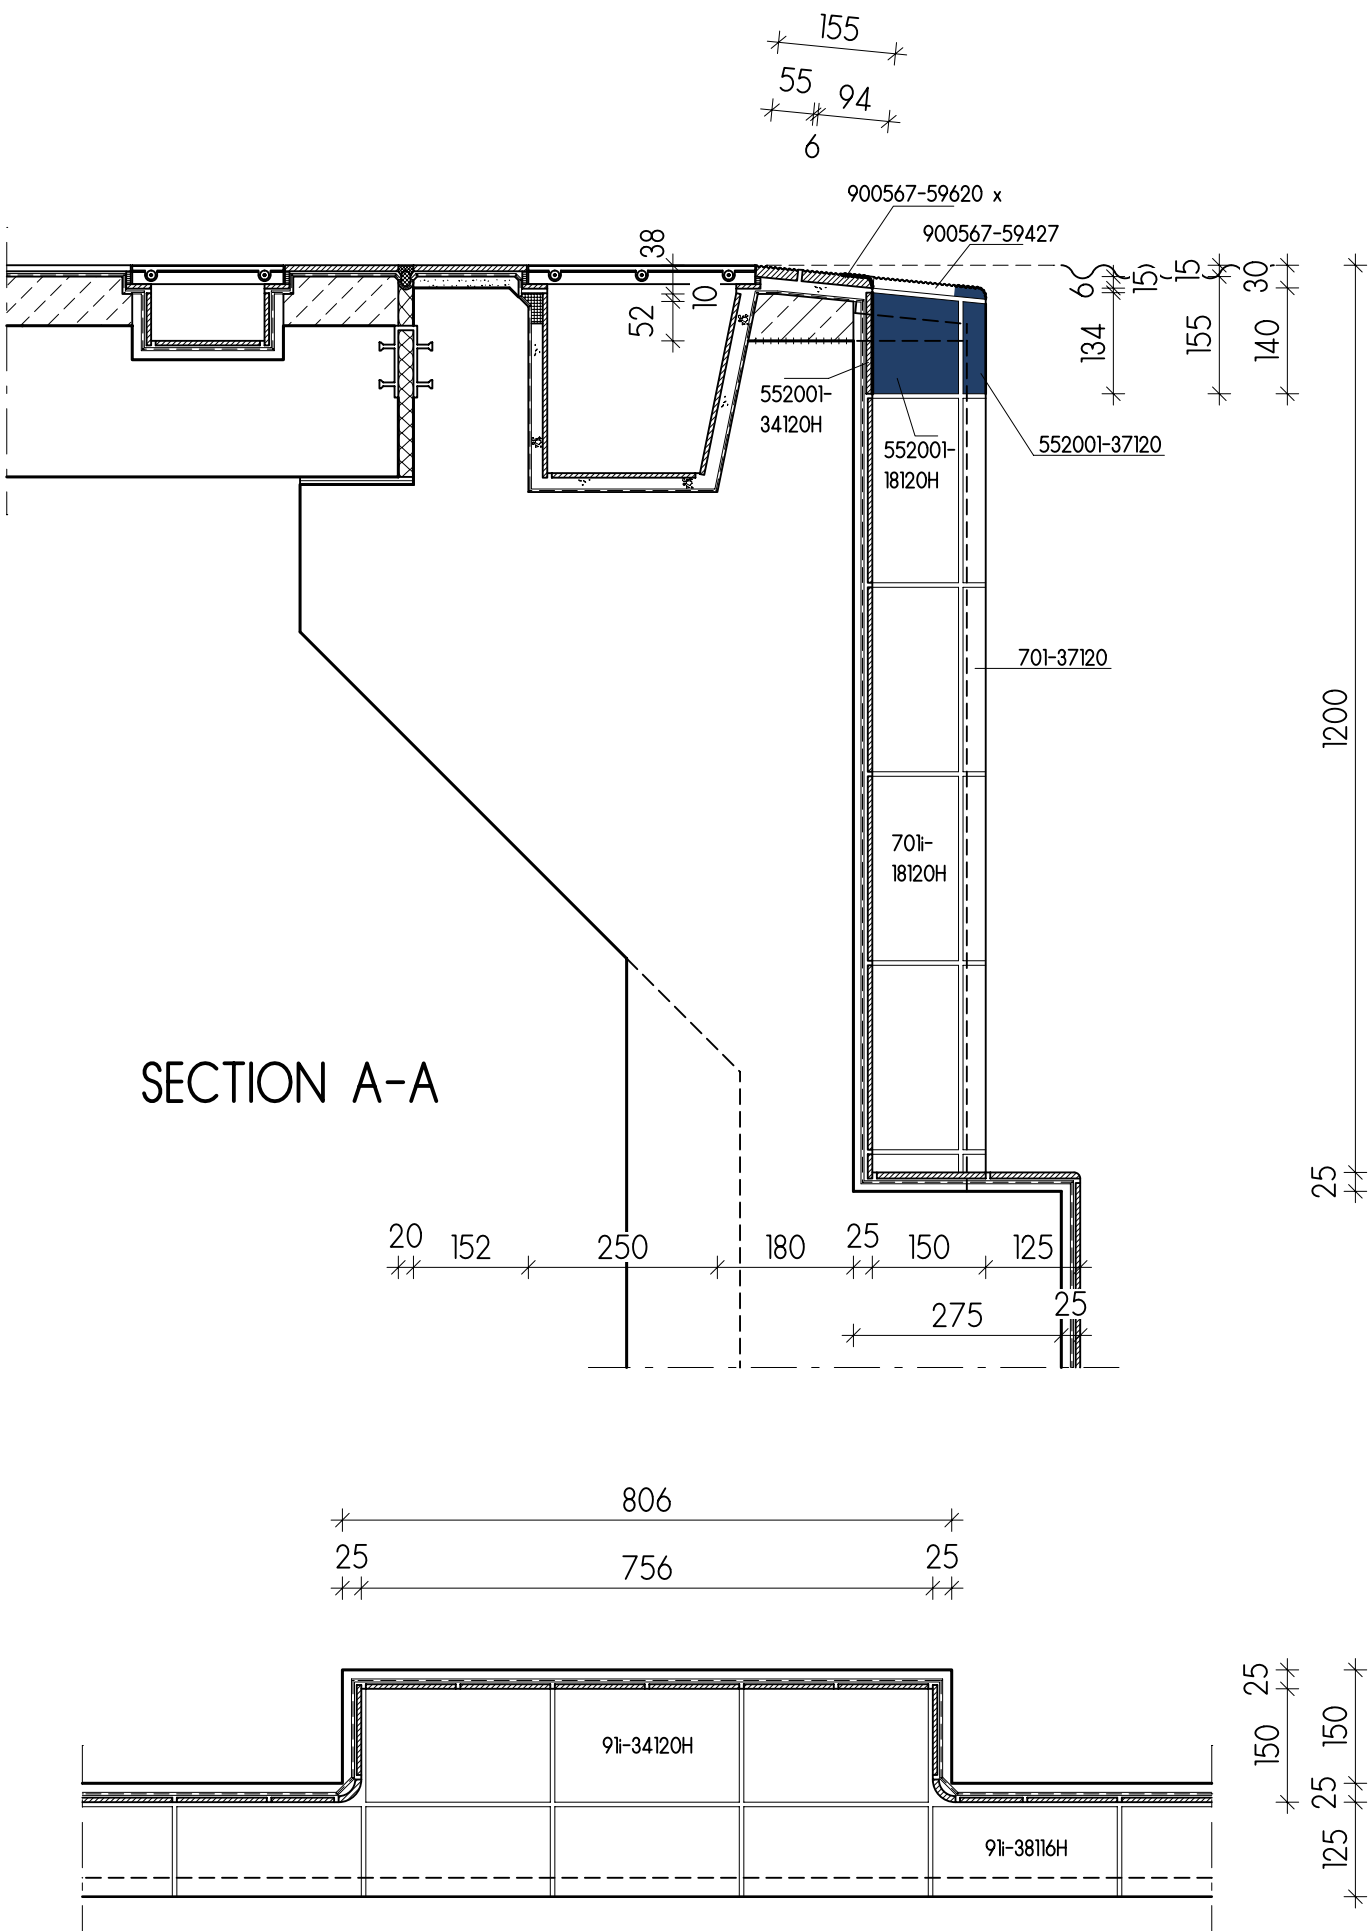

1. Силикон производства фирмы «PCI» Silcoferm.
2. Разделительная лента производства фирмы «PCI»
3. Водоупорный эластичный наполнительный материал
4. Шовная лента, профиль
5. Скользящая опора
6. Решетка Agrob Buchtal
7. Капиллярная запорная масса производства „PCI“
8. Бетон с высоким сопротивлением проникновению воды
9. Обычный тонкослойный цементный слой  
вместе с Специальные склеивающие суспензии PCI Repahft
10. Тонкослойный цементный слой на цементной штукатурке
11. Изоляция многослойная производства «PCI» Sesscoral
12. Уплотнительная лента производства „PCI“ Pecitape
13. Шумопоглощающий слив Agrob Buchtal Silent W 2000
14. Шумопоглощающий слив Agrob Buchtal Silent 100
15. Затирка для бассейнов производства PCI
16. Керамическая получаща Agrob Buchtal
17. Водоприемный «ящик» с водоотводной трубой и фланцевым уплотнительным.

Note of release:

This plan is just a recommendation and must only be used after release by the planner / architect commissioned by the building owner or approval by the direction of works authorised by the building owner!  
AGROB BUCHTAL GmbH expressly excludes liability for all kinds of damages which may result from the plans!  
Without corresponding release the documents are used on the own responsibility and at the sole risk of the executive of construction works.

This plan has been examined, found correct and released for execution:

Place, date Stamp and signature

PERINATAL CENTER

--- statical movement joints / joints in the structure  
--- additional movement joints in the ceramic covering

Movement joints are to be positioned according to statical requirements and local conditions or in accordance with the instructions of the architect or responsible resident engineer. All movement joints, additional expansion joints in the covering etc., which are shown in drawings from the service for architects, shall be regard as recommendations only.

Our suggested methods of sealing are given for guidance only.  
Binding instructions must be given by the architect or supervision of construction.

We recommend to use reaction resin for filling the joints in the whole pool head area, including channel. In case of chemical stresses caused by salt-, sea or thermal water, the entire pool should be jointed with reaction resin. It is absolutely necessary to follow the processing instructions given by the manufacturer / supplier.

The currently valid FINA rules as well as the regulations of the country in question have to be observed.

Number and position of channel outlets are to be fixed by the expert planner.

Our instructions concerning the cleaning of ceramic coverings have strictly to be observed.

The colour representation in this plan is non-binding and may partly considerably differ in reality!
